INTRODUCTION

The total number of registered live births was 536, giving a birth rate of 17.91, which is slightly lower than last year. The number of illegitimate births rose to 1.49 per cent of all births.

The death rate of 8.15 is slightly lower than last year's figure. Coronary heart disease was yet again the highest single cause of death. It is not surprising when one considers the amount of food consumed locally as well as the ever-increasing number of cars and consequent lack of exercise.

The number of people dying from malignancy was the same as last year. Almost a quarter of these were due to cancer of the lung. This is a real tragedy as the majority of these deaths are preventable by not smoking.

We have had no maternal deaths for the 12th year.

Deaths of infants under one year was fourteen, giving an infant mortality rate of 26.12. The Perinatal mortality rate of 25.69 was higher than last year's figure.

All our vital statistics compare very favourably with the figures for the rest of Europe, indicating that our general standard of health is high.

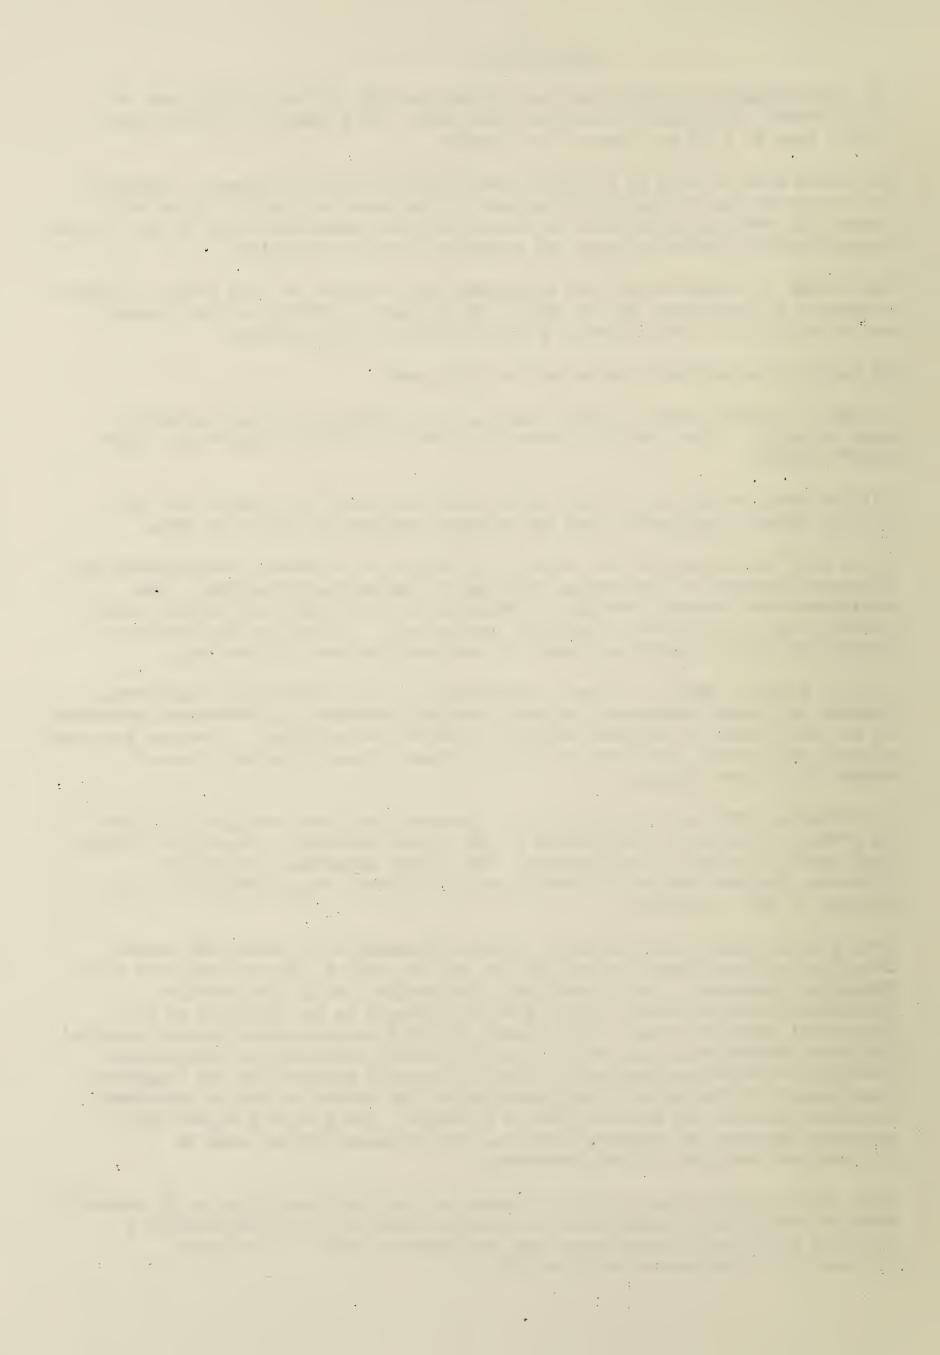

It is very gratifying to note that the incidence of Pulmonary Tuberculosis was 0.14 per thousand of population, which is the lowest ever recorded. Our vigilance over this old scourge of humanity must not relax and routine chest x-raying of all immigrant workers is continuing. All school children are being Heaf tested yearly and those who are positive are followed up.

A Group Practice Medical Scheme, introduced in July 1973 enables registered persons and their dependants to obtain medical treatment in Government surgeries, or in their homes if they are unable to attend the surgeries. Persons who were already included in the District Medical Scheme obtain treatment free of charge under this Scheme.

In September 1973 the Director, Dr A D Bacarese Hamilton, resigned his post in order to take up an appointment in the United Kingdom. Steps have already been taken to recruit a replacement, and, in the mountime, the Deputy Director, Surgeon Captain E H Murchison, has assumed responsibility for the running of the Department.

Dr R M Shaw, Deputy Chief Medical Officer, Department of Health and Social Security, visited Gibraltar towards the end of 1972 at the invitation of the Gibraltar Government, 'to investigate the medical and health services provided by the Government with a fiew to advising on the staffing of the Department bearing in mind the ultimate aim of a comprehensive Medical service'. Dr Shaw's report which was received early in 1973, included recommendations outlining a structure designed to form the overall pattern for the long-term development of the Central Administration of the Medical & Health Department, Hospital Services and General Medical Services. Part of his report dealt also with matters of immediate concern. The recommendations made by Dr Shaw were accepted by the Government.

Work on the construction of the extension to the Mackintosh Wing at St Bernard's Hospital which will accommodate an Isolation Unit and the Public Health & Clinical Pathology Laboratories, was completed in 1973. It is hoped to open both departments early in 1974.

GEOGRAPHY AND CLIMATOLOGICAL REPORT

(i) GEOGRAPHY

Gibraltar is situated in latitude 36° 09'N and longitude 5° 21'W and stands out, steeply and proudly, from the adjoining low-lying Spahish territory to which it is connected by a sandy isthmus about 1 mile long and ½ mile wide. Five miles across the Bay to the West lies the Spanish port of Algerias and 20 miles across the Straits, to the South is Africa. The Mediterranean lies on the East. The distance to Britain is approximately 1,400 miles by sea.

The Rock runs from North to South for a length of nearly 3 miles. It is $\frac{3}{4}$ of a mile wide and has a total area of $2\frac{1}{4}$ square miles. Its highest point is 1,396 feet. The top of the Rock is a sharp, knife-edge ridge extending for about a mile and a half from the North escarpment and then sloping gradually to the South for a bout 1 mile, to terminate at the Southern extremity, Europa Point, in perpendicular cliffs about a hundred feet high. The whole upper length of the Eastern face is inaccessible and the steep upper half of the Western slopes is uninhabited.

(ii) CLIMATOLOGICAL OBSERVATIONS FOR THE YEAR 1973

The following weather details have been kindly supplied by Mr S C Mason, Principal Meteorological Officer, Gibraltar -

RAINFALL

The yearly total rainfall was only 51% of the long term average. Every month was drier than average except May and December; there was no rain at all in September, only a trace of rain was recorded in April, while in October there was only one tenth of the average. May was relatively wet with almost double the normal rainfall.

TEMPERATURE

The mean temperature for the year was exactly the long term average 17.8°C (64.0°F). The highest maximum recorded in June, 33.4°C (92.1°F) was the highest June temperature in the period 1930 to 1973. It can be stated that 1973 was a dry year with normal temperatures, with less sunshine than usual although the latter is biased by a remarkably dull November and a large deficit in March.

SUNSHINE

The total sunshine measured amounted to 2715.6 hours, which is 137.4 hours less than the long term yearly average. A cloudy November with only about half of the average sunshine for that month contributed 75.9 hours to the deficit, while March, July and August were also on the low side with 49.2, 26.1 and 18.0 hours less than the monthly averages respectively. February, September and December had above average sunshine

WINDS

It was a windy year with mean winds above average every wonth except October and December which were a little below average. February, March and April were particularly windy, when gales occurred on one day in each month.

Easterly winds were predominant in March, April, June, July, August, October and November and markedly so in August and November. Winds from the west were more frequent in the other months more especially in January, September and December.

THUNDER

Thunderstorms occurred on 13 days in the year which is less frequent than might be expected on the basis of the long term average frequenty of 16 days per year. The majority were reported in December on 7 days.

FOG

It was foggy on 19 days, 16 of which occurred in July (7), August (5) and September (4). The long term average is 11 days per year.

VITAL STATISTICS

BIRTHS

There were 536 live births registered during the year from the resident population, of which 251 were males and 285 were females. This represents a crude birth rate of 17.91 per 1,000 population, which is slightly lower than last year's figure.

STILLBIRTHS

There were nine stillbirths during the year, 3 of which were females and six were males. This represents a stillbirth rate of 16.79.

ILLEGITI ATE BIRTHS

There were eight illegitimate births of which two were males and six were females. This represents 1.49 of all births, which is below the average figure for the last decade.

As can be seen from the above table these chief causes of death accounted for 181 or 74% of all deaths.

Arterial diseases caused 99 deaths, which is 41% of all deaths. Ischaemic Heart disease was again the highest single cause of death while cerebrovascular disease was the second commonest.

The number of people dying from malignancy was higher than lest year. Nearly 26% of these were due to carcinoma of the lung.

INFANT MORTALITY

The number of deaths of infants under one year of age was 14 which gave an infant mortality rate of 26.12. All of these infants died within the first four weeks of birth, which represents a neo-natal mortality rate of 26.12. Of these 8 died within the first twenty-four hours of life.

PERI-NATAL MORTALITY

As is obvious from the foregoing, it seems to be a question of chance whether the child is stillborn or dies in the first hours of life.

Hence the importance of grouping stillbirths and deaths in the first week of life as Peri-natal deaths.

The number of such deaths has been fourteen which represents a Perinatal mortality rate of 16.51,

NEO-NATAL, INFANT MORTALITY & PERI-NATAL RATES 1945-1973

	Neo-natal	Infant Mortality	Peri-natal
Year	Mortality Rate	Rate	Mortality

INFECTIOUS DISHASIS

The infectious diseases statutorily notifiable under the provisions of the Public Health Ordinance in Gibraltar are -

Smallpox, Cholera, Epidemic Typhus, Plague, Yellow Fever, Relapsing Fever, Dysentery, Diphtheria, Cerebro-Spinal Meningitis, Scarlatina or Scarlet Fever, Typhoid or Enteric Fever, Acute Encephalitis, Acute Poliomyelitis, Chickenpox, Epidemic Parotitis, Erysipelas, Leprosy, Measles, Meningococcal Infection, Ophthalmia, Jeonatorum, Paratyphoid Fever, Pertussis, Puerperal Fever, Pubella, Trachomas, Tuberculosis (all forms), Venereal Disease.

There were 131 cases notified from the resident civil population which represents an incidence of 6.86.

All cases notified are visited by the District Public Health Inspector who investigates and advises the parents on exclusion and fumigation if the case warrants it.

In cases of tuberculosis we have an Assistant Health Visitor who works directly with the Tuberculosis Clinic. She, in close liaison with the Public Health Inspectors, arranges for all necessary investigations and public health measures.

PULMONARY. TUBERCULOSIS

In 1973 we had only 6 cases notified as suffering from pulmonary tuberculosis. Two of these occurred in non-residents and are not included in our statistics. These cases were diagnosed at the routine x-ray examination which is carried out on new workers entering Gibraltar. The two cases were referred back to their respective health authorities for necessary action and treatment. Of the remaining four cases, one occurred in a resident im igrant worker and we therefore only had three new cases notified during the year which is a marked improvement from previous years.

INCIDENCE AND HORTALITY FROM PULMONARY TUBERCULOSIS 1935-39 and 1945-72

MON-RESPIRATOR I TELEROULUSIS

There word no cases notified during the year

BITTEPIO LINTE

We had one cast of typhold and two of paratyphoid nothfied, these two occurred among the local civil population

As I have plovided on stated the fact that entered for more is endemic in the surrounding combined in a constant source of wormy because of the possibility of an outbreak of it occurring hold.

We are the delag will fold handlens on arraval but as they commute frequently to and fro the danger is avery real.

DISE, THERE

This year to hell only two chack of Facillary dysentery notified but it is our belief that an appropriable number of cases do occur yearly and that because of their mildents are treat a complementically and not notified.

DIPHTMERIA

There were again no cases during the year which moves that we have had no cases for twelve years. Two lactors are responsible for this - the greater number of children who we being immunized against the disease or also the fact that there is less contact with the binterland.

RUBELLA

Only two cases were notified.

MEASLES

The outbreak commenced in November 1972 and continued on to January 1973.

POLIONYELITIS

There were no cases during 1973.

VENEREAL DISEASES

Our figures on these diseases must be carefully interpreted as otherwise a very erroneous picture may be deduced.

The majority of the cases, both of syphilis and gonococcal infection have been contracted away from Gibraltar.

VACCINATION AND IM UNIZATION PROGRAMME

Vaccination against Smallpox

In Gibraltar we still have compulsory vaccination at the age of three months and re-vaccination at the age of twelve years in view of our geographical position.

The number of vaccinations and re-vaccinations carried out during the year were -

Primary vaccinations - 411 Re-vaccinations - 1380

The majority of these cases were successfully vaccinated at the first attempt, but the following is a summary of those who required subsequent attempts.

	a decrease of comments of the many services	n notonamina omane latinaten olas (e.). Emmano sen (elem)	estratoremental, service et le le ecosos
	2nd	3rd	4th
	Attempt	Attempt	Attempt
Primary vaccination	59	. 5	
Re-vaccinations	25	. 1	- .
Experience of the second secon			

Very few of the cases vaccinated showed any untoward reaction and these were children who developed very mild forms of generalized vaccina. They all cleared up without any special treatment,

IMMUNIZATI N

This service continuer to be run very successfully from the Health Department now at the Health Centre, Casemates. Considering that no propaganda other than word of mouth has been used to encourage mothers to have their children immunized the attendances are very satisfactory.

It should be noted that these statistics also include the active immunization schemes run by the Services for their families.

The only side effects to these vaccines were mild allergic reactions.

The following is a summary of the cases of primary immunization for 1973:

कारण्ये प्राथमान केरो के मन्त्राप्त विकासका । की प्रायमान विकासकार कारण्ये । की प्राप्त को अस्तर कारण्यासम्बद्ध स्था । का । का । का विकास कारण्यासम्बद्ध स्था । का । का । का । का । का का	The first property pr	7.80 T

ANIMAL CONTROL

The importation of dogs and cats is not allowed except direct from the United Kingdom, the Channel Islands, the Isle of Man or the Republic of Ireland and this, subject to certain conditions.

The dog impounder continued his activities during 1973 and 144 dogs and 388 cats were seized during the year. Five of the dogs were claimed by the owners.

The procedure following the impounding of a stray dog is that the animal is kept in the pound for seven days and if at the end of this period it is not claimed by the owner, it is painlessly destroyed. If, on the other hand, the dog is elaimed, the owner is required to pay the maintenance of the animal during the time it has been kept in the pound. In the event of the animal in question being unlicensed or found not to be wearing a muzzle at the time of seizure, the matter is reported to the Police.

We should express our appreciation to the various Veterinary Surgeons of the RAVC for their advice and help during their periodic official visits to the Rock on the problems of animals generally.

We are also grateful to the RSPCA Inspectors for their hard work and co-operation, and to the Honorary Secretary of the Gibraltar Branch of the Society, for supplying the following figures about the number of dogs, cats and other animals boarded and painlessly destroyed by them during the year 1973 -

NO OF ANIMALS BOARDED AT THE RSPCA KENNELS

165 dogs, cats and other animals/or birds

NO OF AMIMALS DESTROYED

118 Dogs * - all sources road accidents, strays, unwanted, old etc.

288 Cats +

67 Other Animals

473

- * Through old age, chronically sick cases and accidents
- + Wild and accidents

MATERNITY, CHILD VELFARE AND SCHOOL MEDICAL SERVICES

MATERNITY SERVICE

The Maternity Department consists of two wards of thirteen beds, two private rooms, a two-bedded labour ward, nursery, admission room and ante-matal clinic.

On an average there were 30 deliveries per month, the same figure as that for 1971. Mothers stay in hospital 5/6 days for a normal delivery, 8 days for forceps deliveries and 10/14 days for Caesarian sections.

Ante-natal patients were admitted for rest and treatment staying from a few days to several weeks,

Relaxation classes held by the Physiotherapist were well attended. Post natal exercises were possly a trended but written instructions were given to nothers on discharge as an encouragement.

SUMMARY OF WORK IN THE DEPARTMENT

·			1973		1972	2
Total Jive Birthe:	Malez Fomales	159 184	343	16 <u>;</u> 19;		3
Stillbirth	Male: Fomules	5 3	9		2 3 5	ō

Promature bile wild:			2.0		18	3
Twins:			5]	pr;		3 prs
Caousmian Sections:			73		49	9
Tonaemias;			18		1:	1.

Of the 34% bilies born, 27% were delivered by qualified midwives attached to the Department and the remainder by one Medical Staff.

For the Lain , see running there were no maternal deaths.

CHILD TELFARE SERVICE

Child Welfare Clinics were held throughout the year - in the Casemates premises until June and then in the new He lth Centre at Casemates. Dr Kassam was the clinic doctor and he held weekly sessions on Thursdays. During September clinics were held twice weekly, supervised by Dr Valarino. Dr Kassam returned to Chied Welfare duties in October and continues to hold a weekly session on Monday afternoons.

"Well Baby" clinics supervised by the Health Visitor were held every afternoon. Daily clinics prevent overcrowding and lead to more efficient work. Mothers have a better chance of attending the clinic - many of them have full time jobs. Children are generally left with a grandmother whilst the mother is at work. Families are still conscientious about seeing to the welfare of a young child - there are very few exceptions.

There is very little desire to breast feed babies, but there seems to be an overwhelming need in mothers to spoon feed their babies on soups and cereals at a very early age. There are many overweight babies - my department is constantly trying to educated mothers in the intricacies of a well-balanced diet. Mothers continue to give all kinds of vitamins to their children, we try to discourage this practice and tell mothers that vitamins should be prescribed by the child's doctor.

Privately run nursery schools continue to flourish; children whose hame background is poor and anti-social seldom attend them. The young handicapped child who cannot attend normal school is difficult to fit into the existing system. Parental prejudice is hard to overcome.

1973 has seen a drop in home visiting due to staff illness. Social problems continue to take up a great deal of time. Broken marriages appear to be on the increase. Mothers with teenage children are worried about drug addiction and often want to confide their fears "in someone". A very serious case of child assault resulted in the child being removed from his parents and placed in the Edmund Rice Home.

PAEDIATRICIAN'S CLINICS

Number of home visits	3032	3809

SCHOOL HEALTH SERVICE

The School Health Service is under the direction of the Director of Medical and Health Services, who is the Principal School Medical Officer. Children found to be in need of medical treatment are referred to a Special Sick Children Clinic at St Bernard's Hospital or to their own doctors. The immunization of children is under the direct control of the Director of Medical and Health Services, who also gives lectures on Health education in the schools and to Nurses.

In addition to Medical and Dental Staff, a Health Visitor and a team of Assistant Health Visitors assist the Principal School Medical Officer in the day-to-day running of the service.

Mr J Cochrane, the School Dental Surgeon, runs the School Dental Service and holds six half-day sessions in his surgery for teeth conservation etc. Dental extractions under gas or local anaesthetic are carried out at St Bernard's Hospital. Children requiring dental treatment are referred to either the private surgery or to St Bernard's Hospital, as the case may be. Treatment is free.

The cases requiring investigations and or treatment were referred to their family docor, except in such cases where the parents stated that they normally attend the local hospital for lack of funds.

The number examined this year was 851 and the general condition of the health of the children showed an improvement on previous years,

CASES ILLERRED TO THEIR OWN DOCTOR

The number referred to their own doctor was 15, all of which were suffering from some ENT complaints.

CASES RIFERRED TO OTHER HOSPITAL CLINICS

These numbered 22. The majority were referred to the ENT and Orthopaedic Clinics.

CASES REFERRED TO SCHOOL DENTAL CLINIC

One thousand four hundred and one were referred to the school dental clinic.

OPHTHALMIC CLIMICS

One hundred and seventysis of the 352 cases referred to this clinic by the school dector, or at their parents' request, were for refraction, and of these 150 had glasses prescribed. Among the eye complaints were the following cases -

CLEANLINESS

The number of children inspected by the School Nurse during the year was 5776

There were 186 instances of "verminous heads" but it must be noted that this number is boosted up by the number of cases which were found to be infested on more than one occasion.

HOME VISITS

1 10 10 26

The number of homes visited during the year was 296. These were directed at finding out the children's background so as to help and advise parents whose children require supportive treatment.

IMMUNIZATION

The immunization of children is carried out at the Health Centre, Casenates.

HEAF TESTS

A total of 677 schoolchildren were heaf tested with seventeen positive results. Three had previously been given BCG.

PORT HEALTH WORK

Maritime

The statutory function of the Service, the application of the Quarantine Ordinance including the granting of Pratique to shipping, was maintained efficiently throughout the year. As is well known with regard to the service at Gibraltar, the system of operation is designed to cause the minimum of delay in Port entry and, in the case of vessels which call for medical assistance, quick despatch.

There were 155 medical visits to ships during the year. 130 persons were landed due to illness; of these 19 seamen were landed from British ships, 107 seamen from foreign ships and 4 passengers were landed for hospitalisation. These figures do not include seamen landed from R.F.As.

31 ships called into port solely for the purpose of receiving medical advice or treatment.

Cases of cholera continued to be notified by a number of countries including countries situated in the Mediterranean and West Africa, but no suspected cases arrived at Gibraltar during the year.

CARE OF THE BLIND

This section is based on the work of the Gibraltar Society for the Prevention of Blindness.

The year 1973 has seen a further welcome drop in the number of those registered as blind (82) or partially sighted (8) in Gibraltar. Here it must be remembered that 'blind' does not mean the complete absence of sight but that the person is 'so blind as to be unable to undertake any occupation for which eyesight is essential' as in Britain.

(Elsewhere in this report I shall include the partially sighted with the blind

During the year only two new registrations were made, of women aged 72 and 81, while there were six deaths, - of three men aged 47 to 75, and three women aged 73 to 88. Two blind persons left Gibraltar, including the only blind infant on our register. The youngest blind person now living on the Rock is aged 33.

Blindness in Gibraltar has always been largely a question of failing sight in age. Today there are 67 blind over 60 (11 men and 56 women) and only 23 under that age (12 men and 11 women). Although most women live longer than men no one has been able to give a satisfactory answer as to why we have five blind women to every blind man among our senior citizens, while there are only about three women to two men generally in that age group.

The number of blind or partially sighted persons in Gibraltar has in the past 20 years dropped from about 130 to the present 90, although expectation of life has increased considerably.

This improvement must be due to the greater care taken of eyesight, especially in early life. Twenty years ago many parents refused to let their children, particularly girls, wear spectacles, and few allowed any attempt to be made to correct squints while an eye could be saved.

While many families then took great care of elderly parents in their homes and even of distant relations, some old blind persons lived alone in such didtressing circumstances that visitors often wondered if they would ever find them alive again.

A few blind lived in the Government hostel, first at Little Sisters of the Poor and later at Moorish Castle, but many more entered Mount Alvernia when it opened. No less than seventeen blind persons now receive the greatest care and attention in John Mackintosh Homes, 15 at Mount Alvernia and two in the Anglican Home.

The Society is constantly being pressed to help blind persons acquire better accommodation. Government tries to meet these requests, although shortage of housing is always such a pressing problem throughout Gibraltar.

At the request of the Society Government granted free medical attention to every blind person, and a higher rate of Supplementary Benefit than that given to sighted persons.

Bus companies kindly transport blind persons free of charge on production of a ticket with their portrait vouched for by the Society.

REPORT OF THE CHIEF PUBLIC HEALTH INSPECTOR

INSPECTIONS

Five thousand and twelve inspections were carried out by the Public Health Inspectors during the year, in the course of which three thousand nine hundred and thirtythree nuisances were discovered. Appropriate action was taken and subsequently one thousand seven hundred and nineteen visits were paid to ensure that the nuisances reported had been effectively a bated.

Nine hundred and twelve investigations were carried out at the request of the Housing Manager for the purpose of reporting on the living conditions of applicants for accommodation in Government - owned premises, or following complaints made to the Public Health Department by persons living in overcrowded homes; also two hundred and fourty four to determine the fitness of apartments for subletting referred to by Service and Dockyard authorities.

Food catering establishments, ice-cream depots, and mineral water factories were inspected on ninehundred and twenty one occasions.

Deficiencies found were generally put right by verbal representations to the owners of the establishments, but official warning letters had to be served on some of the more recalcitrant.

Sixtythree underground tanks were inspected after cleansing and whitewashing. Periodical samples of water were taken to ascertain fitness for human consumption and chlorination was carried out as required.

Nine visits were paid to Hairdressers and Baber shops.

LEGAL PROCEEDINGS

There were seventyone Court attendances in connection with legal proceedings instituted by the Public Health Department. These prosecutions were conducted by one of our Senior Public Health Inspectors.

Fiftynine attendances in Court were in connection with thirtysix prosecutions under the Public Health Ordinance for non-compliance with the requirements of abatement notices served, these resulted in twenty seven convictions.

One conviction was awarded for an offence against the Food and Drugs Ordinance. Another against the Labour from abroad (Accommodation) Ordinance 1974.

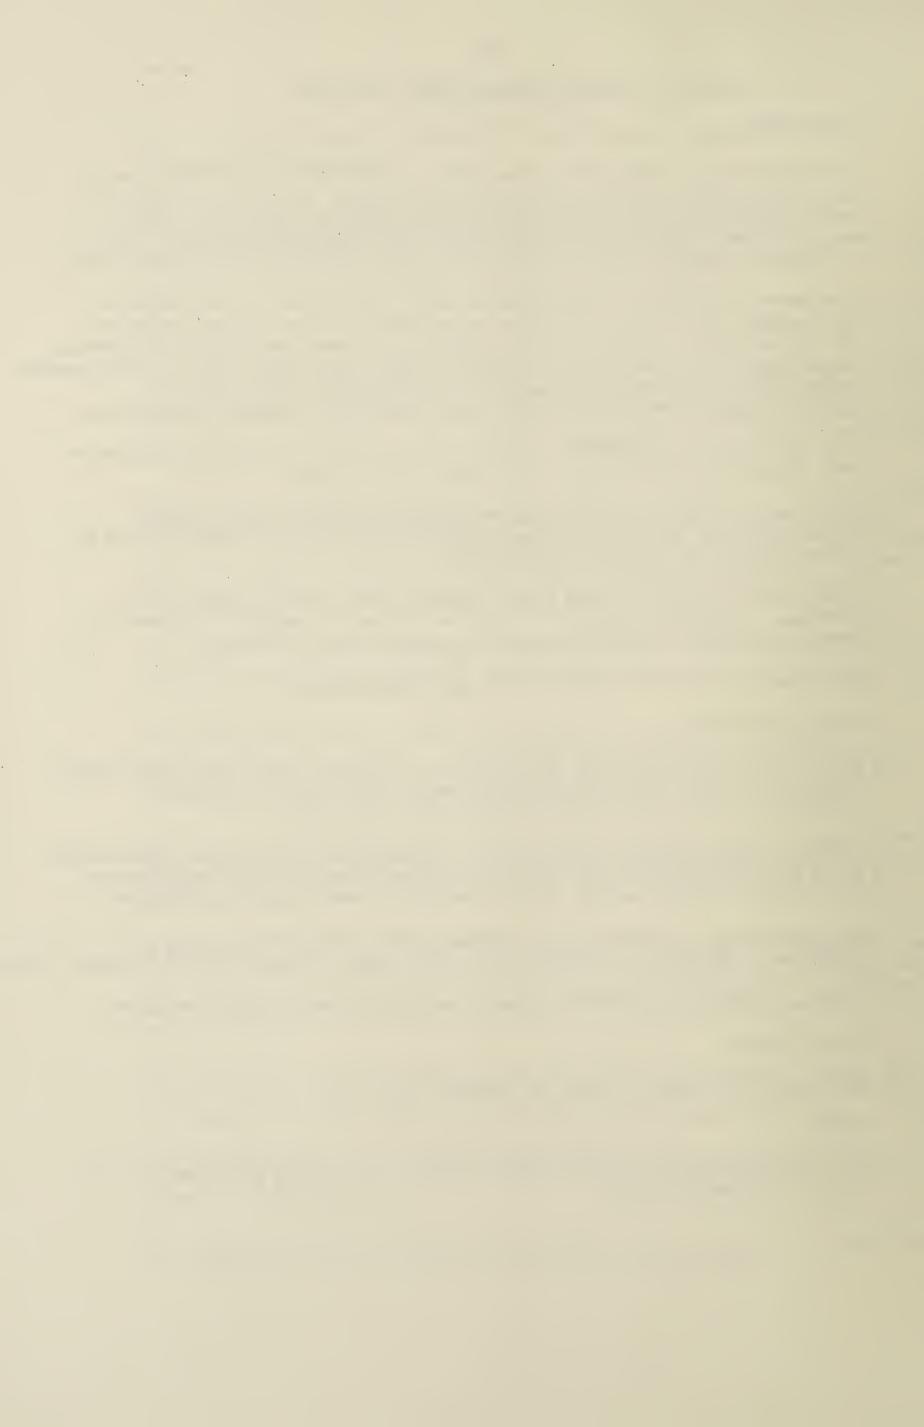

A total of £268 were imposed in fines and £126.60 were awarded as costs.

DRAIN TESTING

Forty one tests were carried out during 1973.

STAFF

Two Assistant Public Health Inspectors left in September to commence their Public Inspection Course.

DISINFECTATION AND DISINFESTATION OF PREMISES	158

DISINFECTATION AND DISINFESTATION

All premises where cases of acute infectious diseases had occurred were disinfected with Formalin.

The Police ambulances were disinfected as required following the conveyance of patients suffering from infectious disease.

Many premises, mainly kitchens and shops, were disinfested for cokkroaches and other vermin. The latest modern insecticide and equipment were used and discretion exercised as to the use of non-toxic materials where food is prepared or stored.

Private dwellings, Government premises and accumulations in open areas were also done as required.

Articles disinfected either by steam or formaldehyde gas, are described in the following table under the head Disinfection.

DISINFECTION

MOSQUITO CONFROL

Identification: 314 samples of mosquito larvae from various localities were examined for identification and the following varieties were found --

Mosquito control was kept up throughout the year and a close liaison was maintained with the Services' Hygienists.

RODENT CONTROL

The measures adopted in recent years for the extermination and repression of this pest were condinued during the year under review with very favourable results.

The poisons at present being used are warfarin, zinc phosphide, arsenious oxide and alpha choralose. Flouroacteamide 1081 was also obtained, primarily for baiting sewers. On these, the most popular, as also the safest, is warfarin. It has not got the short acute knock down action of the other four, but has certainly proved to be a most effective poison for rodents. It is supplied free to members of the public for ordinary treatments. Complaints received are investigated at once and the best treatment to be applied, either by the complainant himself, or by the Rodent Department's team is decided.

Excluding the number of rodents killed privately, an estimated kill of 551 is recorded from treatments carried out by the Rodent Section of the Public Health Department.

Under Article 52 of the International Sanitary Regulations vessels are inspected, as required, for the presence of rat and Deratting Exemption Certificates are issued when appropriate. Fifteen vessels were inspected and fifteen certificates issued during 1973.

FOOD IN RELATION TO H ALTH AND DISEASE

PUBLIC MARKETS

General maintenance work was kept up throughout the year.

FOOD

Supplies of food have been adequate throughout the year.

MEAT

All supplies of frozen beef, pork, veal, mutton and offal were imported from Argentine, Australia, Brazil, Denmark, Germany, Holland, Kenya, Poland, Sweden, United Kingdom, United States and New Zealand.

40638 lbs of Koshner meat were imported from Morocco and 85536 lbs of fresh meat from the United Kingdom, this represents a considerable increase from previous years.

POULTRY

This is mostly imported frozen but some fresh poultry was also available throughout the year.

FISH

With the exception of small consignments brought in by local fishing boats, all fish was imported from Morocco.

EGGS

Adequate supplies have been imported from the United Kingdom, Belgium and Holland.

FRUIT AND VIGITABLES

Supplies of fresh fruit and vegetables were imported from Morocco and other European countries invluding Great Britain.

MILK

Sterilized homogenised milk in scaled bottles, as also UHT milk were imported from the United Kingdom and other approved countries. However, condensed or evaporated tinned varieties are the staple products commonly used.

GROCERIES

Groceries imported from the United Kingdom and other countries have been adequate, and generally of satisfactory quality.

SLAUGHTERING

There is one slaughterhouse in Gibraltar situated in the Upper Rock. Adjoining this slaughterhouse are the piggeries, which house some 200 pigs.

Fourty-seven pigs with a total weight of 6718 lbs were slaughtered during 1973. These were duly inspected (ante mortem and post mortem) by the Public Health Inspectors and passed as fit for human consumption with the exception of one pig weighing 109 lbs which was found unfit for human consumption and duly condemned.

ICE CREAM

All premises where ice-cream is sold must be registered with the Government in accordance with the provisions of the Food and Drugs Ordinance.

Frequent visits were paid by the Public Health Inspectors to advise on measures designed to attain the highest standards of cleanliness and hygiene possible. Twenty-four samples were taken and examined bacteriologically in the Public Health and Clinical Pathology Laboratories.

Considerable quantities of ice-cream manufactured by reputable firms in Great Britain and Italy were also imported regularly. The sale of these products is conditional to their being sold in the original sealed wrappers or containers, and subject to the same sanitary requirements as those produced locally. Soft ice-cream is also finding an increasing market in Gibraltar, this being sold both at establishments and from mobile units.

EATING HOUSES - CONFECTIONERIES AND CAFES

All premises wherein food is prepared by any process of cooking or which are used for the manufacture or preservation of food products as well as purveyors and vendors of refreshments, confectionery, cakes, sweets, etc., must be registered with the Government.

Food catering establishments were inspected regularly by the Department's Inspectors, in the course of which advice was given to the owners on food hygiene and on all matters concerning the storing handling and preparation of food destines for human consumption.

The various samples taken under the Food and Drugs Ordinance during 1973 are classified in the following table -

PUBLIC HEALTH AND CLINICAL PATHOLOGY LABORATORIES

REPORT OF THE PATHOLOGIST-ANALYST GIBRALTAR

One hundred and four thousand, two hundred and sixty seven investigations were carried out on specimens submitted to the Laboratories during the year 1973. This shows some increase (4,157) over the previous year.

The Laboratories are responsible for all the investigations for the Civil population of the nature of Pathology, Public Health and Analysis of samples in accordance with the Foods and Drugs Ordinance.

Work in the new laboratory at St Bernard's Hospital is nearing completion and will be ready for occupation in the new year. The new premises will provide a much needed expansion in working space.

In the role of a Yellow Fever Immunization Centre recognised by the World Health Organisation, one hundred and thirty persons were vaccinated and issued with International Certificates.

The tables in pages 39 to 43 show a breakdown of the work done in the Laboratories during the year.

The Technical Staff has two vacancies in the grade of Technical Assistant caused by two female officers leaving the Service for domestic reasons. It is hoped to replace them in the near future.

MEDICAL AND HOSPITAL REPORT

I ADMINISTRATION

The Government Medical and Health Services consist of:

Hospital Services, Specialised Medical Treatment outside Government hospitals, (where such treatment is beyond the scope of local resources); Child Welfare and School Health Services; Domiciliary and Out Patient Treatment of persons coming under the scope of the District Medical Service; Domiciliary Medical Service; Port and Airport Health Service; Public Health Inspection and Laboratories.

A Group Practice Medical Scheme was introduced in July 1973. The Scheme enables registered persons and their dependants to obtain medical treatment in Government surgeries or in their homes if they are unable to attend the surgeries. The fee for attendance at the surgeries is 20 pence. The fee for house visits is 50 pence during normal hours and 75 pence outside these hours. Persons who are included in the District Medical Scheme obtain treatment free of charge.

Gibraltar is to have a reciprocal health services with Britain as from 1st January 1974.

Under this Agreement Citizens of the United Kingdom temporarily resident in Gibraltar shall be entitled to health care in Gibraltar on the same conditions as citizens of Gibraltar. Citizens of Gibraltar temporarily resident in the United Kingdom shall be entitled to health care in the United Kingdom on the same conditions as the people of the United Kingdom.

The agreement shall not apply to persons who go from one country to the other for the express purpose of benefiting from the agreement, except that, where a citizen of Gibraltar is in need of hospital care for which adequate facilities do not exist in Gibraltar he shall receive that hospital care in the United Kingdom on the same conditions as people of the United Kingdom.

Notwithstanding the new Agreement a British Subject ordinarily resident in Gibraltar is entitled to use the Government's medical services and will be charged the same fees as a Gibraltarian.

The Gibraltar League of Hospital Friends and the Albert Ferrary Trust, contributed in no small measure to the welfare of the patients with gifts in cash and in kind. A number of other gifts and donations were also received from other sectors of the community.

Mr L L Bromley, FRCS, Surgeon in Charge of the Thoracic Unit, Dr Oscar Craig, Consultant Radiologist and Dr K Granville Grossman, Consultant Psychiatrist from St Mary's Hospital, Paddington and Mr Henry Shaw FRCS, Ear, Nose & Throat Consultant at the Royal Marsden Hospital, London, visited Gibraltar on various occasions during the year to a dvise in their mespective specialities and where necessary to operate.

Thirty seven patients were sent to various hospitals in Britain during the course of the year. As usual, the majority of these went to the Royal Marsden Hospital and to St Mary's Hospital, London.

The Emergency Dispensary Service consisting of a small dispensary At St Bernard's Hospital staffed by personnel from the Hospital Dispensary, at which the public could have prescriptions obtained after hours dispensed on payment, continued to get the needs of the community.

II STAFF

There were 79 nurses in training. Twenty-seven of these entered the Service during the year and attended a one nonths course of pre-nursing orientation and adaptation.

Seven passed one part of the Intermediate and fifteen passed both carts of the Intermediate.

Nine nurses did the Senior course and seven entered and passed the Final examination and were promoted to Staff Nurses.

Two nurses were sent for training to the United Kingdom during the year under review under Government Sponsorship.

The following changes in the medical staff took place during the year -

NEW APPOINTMENTS

Dr James Wilson, 15 January
Surg Lt Alan Bray, 15 January
Dr Keith Sweetman, 26 March
Dr Diane Sims, 16 May
Dr John James Meenan, 20 June
Dr Jon Parker, 13 July
Dr Robert K Hurst, 30 July
Dr Paul Ciclitira, 3 August
Dr Edward H Davies, 7 September
Dr David Wood, 15 October
Dr Richard Miller, 1 December
Dr Albert Soler, 1 December
Dr James F O'Mahony, 31 December

LEFT THE SERVICE

Dr L Peralta, 30 April
Dr C Bishop, 5 June
Surg Lt A Bray, 31 July
Dr James Wilson, 2 August
Dr John James Meenan, 31 August
Dr A Bacarese Hamilton, 5 September
Dr S Peskett, 27 September
Dr R Valarino, 30 September
Dr Edward H Davies, 30 September
Dr Joseph Gardiner, 18 November
Dr David Wood, 14 December

III LEGISLATION

The Medical & Health Ordinance came into effect in March 1973. This Ordinance consolidates the legislation relating to Medical and Dental Practitioners, Pharmacists, Nurses Midwives and Hospitals, previously contained in the following Ordinances:

Hospital Ordinance (Cap. 72)
Medical Practitioners and Dentists Ordinance (Cap. 102)
Midwives Ordinance (Cap. 107)
Nurses Registration Ordinance (Cap. 114); and
Certain provisions of the Pharmacy and Medicine Ordinance (Cap. 125)

and provides for the rationalisation of various Boards in order to reduce their number.

The Misuse of Drugs Ordinance dated 20 March 1973 made new provision with respect to dangerous or otherwise harmful drugs and related matters and repealed the Dangerous Drugs Ordinance.

The following Legal Notices were published on the 21 June 1973 under the powers conferred on the Governor under Sections 68 and 69 of the Medical and Health Ordinance; No 67 of 1973 which set out the duties of the Management Board established under Section 4 of the Ordinance; No 68 of 1973 which set out the composition of the Health Committee established under Section 69 of the Ordinance; and Ho 69 of 1973 which set out the composition and duties of the Hedical Committee established under Section 69 of the Ordinance.

The Group Practice Medidal Scheme Ordinance, which came into effect on the 2 July 1973, established the Scheme referred to above.

The Labour from Abroad (Accommodation): (Amendment) Rules dated 5 July 1973 set out the amenities to be provided in accommodation let for the use of workmen.

IV FINANCIAL

Fees are payable in accordance with the Hospitals (Fees & Charges) Rules, but in the case of "entitled persons" ie

- (a) British subjects ordinarily resident in Gibraltar;
- (b) Gibraltarians resident in the Campo Area;
- (c) Aliens working and residing in Gibraltar under permits of residence, their wives and children under 21 if also resident;

the in-patient fees are related to family size and family income. The scale of fees payable by "entitled persons" ranges from 5p to 50p and out-patients pay a fee of 20p for each consultation. The issue of free medicines to out-patients is also related to family size and family income. No charge is made for medicines to any in-patient, but patients in Private Rooms, "non-entitled persons" in general wards and "entitled persons" in general wards whose family income exceeds £25 per week, have to pay additional charges for Operation, Anaesthesia, Accouchement, etc.

V DISTRICT MEDICAL SERVICE

The District Medical Service is now incorporated in the Group Practice Medical Scheme. Group Practice Medical Scheme Doctors and a team of District Nurses see District Patients at the Health Centre and attend to domiciliary cases whenever necessary. Treatment, including hospital treatment medicines and any surgical appliances that District patients may need, are provided free of charge. GPMS also provides medical attention required by the residents of the John Mackintosh Homes for the aged.

VI HOSPITALS

(1) ST BERNARD'S HOSPITAL

St Bernard's Hospital, with 182 beds, is essentially available for the resident community and the passengers and crews of ships and planes calling at Gibraltar, but patients from neighbouring districts are given facilities for treatment and hospitalisation. The Hospital provides a comprehensive Out-patient service and In-patient treatmen for acute medical and surgical cases. In addition, it has a Maternity Section, a ward for elderly sick patients and a small isolation unit.

The number of beds is made up as follows -

Napier Ward (Male Surgical)	23
Godley Ward (Fenale Surgical)	23
Don Ward (Geriatric)	
· ·	
Children's Ward	
Maternity Block	
John Ward (Male Medidal)	29
Victoria Ward (Female Medical)	
Intensive Care Unit	3
Recovery Unit.,	5
Private Corridor	17
Fra I m	7.00
Total	182
	The second second

The following table shows in-patient statistics for the year under review compared with 1972

	1973	1972
Total daily bed counts:	42530	44170
Average number of patients per day	117	121
Average length of stay (days)	12.5	13
Number of admissions:	3415	3497
Number od deaths:	170	17.3

One thousand three hundred and twentyseven operations were performed in the major operating theatre during the year, as against 1284 in 1972.

The break-down of operations was as follows:

	1 <u>973</u>	1972
General Surgery	550	460
Gynaecology	212	254
Urology	88	99
Orthopaedic	246	189
Thoracic	18	15
ENT	137	193
Dental	38	34
Ophthalmic	36	39
Neurology	2	1

OUT PATIENTS DEPARTMENT

The Out-patients Department provides a twenty-four hour Accident and Emergencies Service.

The Blood Department is a self-contained department, responsible for a Central Syminge Sprvice and Central Sterilo Supply Department. They all work in close limited with the Out-patient Department.

Dental Clinics continued to be held every Monday, Mednesday and Friday afternoons, for extractions only, under Gas and Oxygen or local anaesthetic.

The clinics for diseases of the eye are held daily and an Ear Nose and Throat Clinic is held once a week.

In addition to patients attended at the regular Ophthalmic clinics, patients suffering from domestic and industrial accidents were also seen. A small number of children suffering from squint are given Orthoptic treatment twice weekly.

The total number of patients seen during the year was as follows -

Adults, new patients	1746
Adults, old patients	1087
Prescription for glasses given	824
Romestic and Industrial	1025
Children, new patients	498
Children, old patients	205
Prescription for glasses	2096
-	

During the year a total of 40 major and 60 intermediate operations were performed.

Minor operations are mt included in this report.

An Ear, Nose and Throat Clinic is held approximately every three months by Mr Shaw, Ear, Nose and Throat Consultant from the United Kingdom. The number of patients seen at this Clinic is given under the Out-patient statistics.

X-RAY DEPARTMENT

The statistics for the year were as follows -

	1973	1972
Number of patients examined Gastro Intestinal examinations Biliary examinations Renal examinations Abdominal investigations Pregnancy investigations Thoracic investigations Extremities investigations Cranial investigations Spinal investigations Tomography examinations Bronchography examinations	8831 288 245 102 630 35 5010 1758 651 588 28	\$172 288 283 107 672 39 4779 1720 652 751 25
Cases requiring X-Ray control in the Operating Theatre	24	20
Cases requiring X-ray with mobile unit in Wards Cases X-rayed after normal working	205	147
hours including week-ends and Bank Holidays Films used Units Private patients examined	199 13631 18409 2626	325 14206 84891 -

Dr Oscar Craig, the Consultant Radiologist, paid four visits during the year.

PHYSIOTHERAPY DEPARTMENT

The Department was quite busy throughout the year and both in-patients and outpatients have benefitted greatly from the various forms of treatment.

Consultant orthopaedic and fracture clinics are held weekly in the Department.

Treatments given during the year were as follows -

		1973	1972
	Total number of in-patients treated Total number of in-patients Total lumber of out-patient treated The lumber of out-patients	3473 560 11585 1712	2525 438 13776 1519
CLINICS	Fracture Clinic - patients Old patients Physiotherapy Clinic	137 905	
	New patients Physiotherapy Clinic	637	

SPEECH THERAPY DEPARTMENT

This department came into operation again in January 1973 under the sole care of Miss Ruth Prestwich:

Attendances: Children 1409
Adults 365
Sessions Held 405

Daily Appointments - up to 13 are made, but this varied according to type of patient.

Average number of patients per month:	Children Adults	33 6
Total number of patients during the year	r: Children Adults	55 20
Total discharged:	Children Adults Forces Children Discharges to UK	14 16 8 2

SCHOOL VISITS:

Awerage 10 - 12 per month. Attendances fell during school holidays.
HEARING TESTS: About 6 were carried out.

SOCIAL HYGIENE

Treatment for venereal diseases is available, and under the terms of the International Agreement, merchant seamen or any other visitor of all nationalities can attend to the day.

(2) K G V PSYCHIATRIC UNIT

K G V Hospital is the only Psychiatric Unit in Gibraltar. It has a capacity of 60 beds. Like the other Hospital in the Department it caters principally for the resident civilian community and passengers and members of crews of ships visiting Gibraltar, but patients from the armed forces and British Subjects residing in neighbouring countries are also admitted. Admission is subject to the same administrative conditions as applied to the other Hospital in the Department.

The Occupational Therapy Repartment forms an integral part of the Unit and although it provides occupational and diversional therapy for patients in the other Hospital who may require it, the bulk of its work is concerned with patients from the Psychiatric Unit some 20 of whom attend the Department twice daily. More details of this Department will be found further on.

An out-patient clinic is held every Wednesday afternoon, with the Superintendent, Dr C M Montegriffo in attendance, who also holds a clinic at St Bernard's Hospitalevery Friday morning. He also attends the in-patients in the Unit every morning, and answers emergency calls.

A welfare and district service is very efficiently run by the Mental Welfare Officer. Mr M Ruiz, whose office is housed at the Medical Health Centre. His duties consist of attending all clinics, to be on callat all hours of the day and night when his services are required by the Hospital, Doctors, Police and relatives of discharged and out-patients. He visits patients at their homes, his office and places of work. Working in conjunction with the Superintendent he has been able to find jobs and accommodation for patients during the course of the year. Due to his work a large proportion of discharged and out-patients are able to live a compatible life with the community. The work of the Mental Welfare Officer has proved very profitable in the field of Welfare and District Service and is reaping rewarding results.

Dr Granville Grossman, the Consultant Psychiatrist, visits the Unit on 4 occasions during the year. He examines in-patients and also holds out-patient clinics in consultation with the Superintendent.

RECREATIONAL ACTIVITIES

Patients attended football matches, went to a local cinema, the annual fair and similar outings accompanied by members of the Staff. During the Summer they were taken to the beach and for walks around the Alameda Gardens. Annual parties were given on St Joseph's Day and on Christmas Day.

As in previous years, members of the Jewish Hosbital Committee supplied cakes for high teas and distributed sweets and also cigarettes to all the patients at all their Feast Days. Each patient received a Christmas present from the Red Cross, and a present each from the Matron at the Christmas Party.

During the course of the year, Messrs Sacconne and Speed Ltd on several occasions supplied a fairly large quantity of cigarettes for the patients.

Patients attended Holy Mass at the nearby St Joseph's Chapel as well as at the HospitalChapel on Christmas Day.

LEAGUE OF HOSPITAL FRIENDS - This organization has given great satisfaction to both the patients and the Staff, with their help and support during the course of the year. To enumerate all their work and activities would be an endless task, but to mention just a few they consisted of supplying cakes and soft drinks at monthly parties where sweets and cigarettes were also distributed to all patients, during these parties they supplied music and partners for the patients to dance and at times life entertainment. Their gifts have included, footrests, pictures, curtains, etc. They also presented each patient with a gift on Christmas Day.

Mr Restano also from the League of Hospital Friends visited the Unit almost every Friday and with the help of several young ladies who accompanied him, distributed sweets and cigarettes to all the patients.

Some anonymous organizations also presented the patients with some kind of gifts and some donated cash for the Unit.

To all its benefactors who presented the Hospital with **gifts** in cash and in kind and to those who gave their services free to organize recreational activities for the patients the Department is greatly indebted.

IN-PATIENTS STATISTICS

The following table shows the in-patients statistics for the year under review :-

Average number of patients per day	54
Number of admissions during the year	145
Number of discharges	117
Number of deaths	6
Informal patients (Section 4)	34
Patients for treatment (Section 6)	17
Certified patients	3

8 patients had courses of electro-Convulsive-Therapy receiving a total of 42 shocks in all.

DISEASES TREATED

Epilepsy	1
General Paralysis of the Insane	3
Schizophrenia	12
Paranoid Schizophrenia	10
Manic-Depressive	2
Senile Dementia	10
Oligophrenia	8
Alcoholism	4
Agitated Melancholia	1
Acute Depressive State	3

OUT PATIENTS STATISTICS

The total number of attendances at the out-patients clinic in the Unit was 1159.

12 patients received courses of Electro-Convulsive-Therapy having a total of 66 shocks in all.

OCCUPATIONAL THERAPY DEPARTMENT

As previously stated 20 patients attend this Department daily, and under the supervision of Miss B Bruzon they perform many types of work. These consists of cane work, tapestry, water colour painting drawing, making pictures and framing them, etc. this is done in the mornings and mostly by the male patients. The females are engaged in sewing, knitting and the making of gauze swabs for the Operating Theatre. In the afternoons they usually tackle the unfinished jobs from the morning and finish the day playing games. The patients spend from 9am to 12 mid-day and from 1 to 5 pm daily from Monday to Friday every week except on Public Holidays.
